Model R™

Recondition the future uptime of your JBT filler | seamer

PRoCARE®

The smart way to produce
more tonnage per day

jbtc.com/foodtech

Model R™ - Complete Machine Rebuilt

- **Complete machine rebuilt**

Our customer Care Workshop rebuilds existing JBT filler/seamer equipment. The machine can be your asset or can be part of JBT's machine park of used equipment. In both cases we completely rebuilt the filler/seamer to meet all your line specifications.

A JBT filler/seamer rebuilt starts with the complete disassembly of the equipment. All wear & tear parts are discarded and we execute a risk assesment on all recycled parts. In a next step we build-up the machine: we re-install the thoroughly checked parts and the required new parts, updated to the current standards.

- **Re-engineered to your specific line requirements**

We rebuilt the machine in accordance with your application, product & packaging, your other peripheral devices and line controls.

- **Executed to the new industry standards**

We update the machine to legal standards and common safety regulations. Controls and PLC are also taken to a higher level and smoothly integrated in your line management system software.

- **Warranted & guaranteed performance**

We consider a rebuilt as an order for a complete new JBT machine. Consequently, the rebuilt operation is supervised by a dedicated Project Manager. You receive equal warranty rules as for new JBT equipment with guaranteed performance (Factory and Site Acceptance Tests). Finally we ensure installation, commissioning and on-site training of your operators.

Complete machine rebuilt of a 10 head X59 seamer synchronized with a high-capacity filler with 66 fill stations. Output 800 to 1200 cpm. Upgraded with full automatic lubrication and C.I.P. skid for dairy applications.

By choosing a Model R solution to rebuild your filler/seamer you recondition your future uptime ensuring product quality, food safety, longer shelf-life and low Total Cost of Ownership

We perform rebuilds of stand-alone seamers to be synchronized with fillers or worm infeed table applications.

Mid-range filler-closer group (300-600 cpm). Upgraded with full C.I.P. features and a nitrogen doser for beverage applications.
